## Indications for use.

Kliniderm® silicone wound contact layer is indicated for chronic and acute wounds including; skin tears, traumatic wounds, cuts, abrasions and lacerations, blisters, superficial and partial thickness burns, surgical wounds, pressure ulcers, diabetic foot ulcers and leg ulcers.

*Kliniderm silicone wound contact layer provides significant savings Ask to find out more!*

## Gentle contact, ensuring patient comfort.

Kliniderm® silicone wound contact layer consists of a polyurethane film coated with a soft silicone layer. Its porous structure allows exudate to pass through easily into an outer absorbent dressing such as Kliniderm® superabsorbent.

### Gentle silicone adhesive

*helps minimise the risk of pain and damage to the wound at dressing changes*

### Skin friendly

*reliable fixation and safe for fragile skin improving patient compliance*

### Up to 14 days wear time

*allowing the wound to remain undisturbed when the secondary dressing is changed*

### One sided adhesive contact layer

*ensures easy handling and prevents secondary dressings from sticking*

### Transparency

*allows for wound inspection*

### Reduces risk of maceration

*perforations allow exudate to pass into secondary dressing*

### Conformable and comfortable

*for the patient, helping to improve compliance*

### Easy application and removal

*helps minimise wound disturbance*

### Can be cut to shape

*to suit clinical requirements*
